

SESSION 1 · COURSE LAUNCH

AI Applied to **Business and Society**

Global BBA · August–December 2026

Prof. Yuri

Two trainings

- Computer science

MSc, UFMG — I build these systems

- Law

LLB, UFMG — I deal with what they are permitted to do

Three places I work on it

- **Building**

Munin, co-founder and CEO · Skysales, LLM agents in production · einthoven.ai, cardiology

- **Governing**

AGGF, Head of Digital Law — LGPD/GDPR, AI governance, platform liability

- **Researching**

machine learning · AI governance · jurimetrics

Why both halves

The course is the overlap. Neither circle on its own gets you there.

01

The learning contract

How the course works, and what each of us owes the other.

Where everything lives

- Course calendar and materials
readings, seminar assignments, capstone brief, all dates
- Dates are per class
the two cohorts sit on different calendars — yours is the one that binds
- Open it now and bookmark it

What you will be able to do by December

- Explain how modern AI works, conceptually
no code, ever — but you will know why a language model hallucinates
- Locate where AI creates and destroys value
function by function — operations, marketing, finance, HR, strategy
- Build a case that survives a CFO
costed, not asserted
- Govern a deployment
the rules, the accountability, the limits, the people affected
- Read past a headline
including two credible ones that disagree

You are the protagonist

- You lead, I facilitate
the agency is yours; I guide the route
- Learning here is social
discussion, pairs, teams — everyone speaks
- Error is an instrument
being wrong in this room is safe, and we mine it

How each concept gets taught

You commit to an answer before I give you one.

A typical session

A group presents

the day's reading

We run a case

a real or simulated decision

You write

10 min

Project time

with your group

Four blocks, every week. You leave having written something.

Three kinds of case

- **Case studies**
real organisations, real decisions, real constraints
- **Simulated cases**
you take the role — manager, consultant, regulator — and make the call
- **The term project**
one applied piece of work, carried across the whole semester

The capstone

- **Map how work actually flows**
through one organisation, as it is — not as its org chart claims
- **Find where AI helps**
and where it is an expensive distraction
- **Cost it**
the opportunity has to survive contact with a number
- **Govern it**
the rules, the accountability, the limits
- **Defend it**
report and presentation, in front of me and your peers, in December

Three milestones, not one deadline

- M1 — process map
how work actually flows through the organisation
- M2 — opportunities and ROI
where AI helps, where it is an expensive distraction, what it costs
- M3 — governance and ethics
the rules, the accountability, the limits

Four things are assessed

100 points · no final exam

The exams

- Two of them, both before the last block
Exam 1 · 20 points — Exam 2 · 15 points
- Open questions and multiple choice
both formats, in both exams
- Closed device, no AI
the one place in the course where the tools are set aside
- There is no final exam
the course ends on your project instead

The seminars

- Your group presents three times
5 points each · you lead the room on that day's reading
- Everyone writes feedback, every week
including in the weeks your group is not presenting
- Some days, two groups and two texts
opposing readings on the same question — the disagreement is the point

Participation

- A paragraph at the end of every class — 8
what you learned that day, in your own words
- Not on the day your group presents
presenting is that day's contribution
- Peer evaluation inside your group — 2
the average of the marks your groupmates give you

Three assessment windows

by 26/09

Window 1 · 30 pts

Exam 1 · M1 · Seminar 1

by 18/12

Window 3 · 40 pts

Final report · M3 · Seminar 3 ·
Participation

by 30/10

Window 2 · 30 pts

Exam 2 · M2 · Seminar 2 ·
Participation

100 points in total · no final exam

Readings

- Open access
linked in the calendar — click and read
- SKEMA Learning library
log in, search, read
- You will not buy a single book

What I ask of you

- **Be here, on time**
the register closes after the first five minutes
- **Read before you arrive**
come unread and you spend 100 minutes as a spectator
- **Talk**
a wrong answer offered beats a right one withheld
- **Carry your group**
you present three times · there is a peer-evaluation channel if it breaks
- **Bring the outside world in**
the news, an internship, your family's business

What you can hold me to

- Class starts and ends on time
- Every reading is free
open access or SKEMA Learning — you will buy nothing
- Grades and feedback within two weeks
always, from submission
- I will say when something is contested
and much of this field is · if I do not know, I will say so and find out
- No gatekeeping
the technical content is taught to be understood, not to reward prior exposure

Using AI in this course

- Use it
refusing would be professional malpractice
- Disclose it
which tool, what for — two lines · disclosure never costs marks
- You own the output
if the model invents a source, that is your error — you signed it
- It must not replace your thinking
use it to attack your argument, not to have it
- Exams are AI-free
both of them, closed device

**By the time I graduate, AI
will have made the job I
want **easier** to get.**

02

What is already happening

Three things, none of them a forecast.

One study — the entry level thinned

ADP payroll records — millions of workers, monthly, through September 2025. Not a survey. In both occupations the **22-25** line falls after late 2022 while every older band rises.

Brynjolfsson, Chandar & Chen, Canaries in the Coal Mine?, Stanford Digital Economy Lab, 13 Nov 2025, Fig. 1

Another study — employers expect the opposite

FIGURE 1:

Impact of AI Use on Entry-Level Hiring Volume: 2025 and Expected 2026

Base: Employers that have at least explored using AI and hire entry-level employees (N=1,387).
Employers that answered "no significant change" are not represented.

Strada Institute, Entry-Level Hiring in the AI Era, May 2026, Fig. 1

The decline tracks automation, not AI use

Same payroll data, split by how people actually use Claude. Where use is **automotive**, the most-exposed lines fall. Where it is **augmentative**, they do not — the top quintile is among the fastest-growing.

Brynjolfsson, Chandar & Chen, *Canaries in the Coal Mine?*, Stanford Digital Economy Lab, 13 Nov 2025, Fig. 3, panels B and C · usage classes from the Anthropic Economic Index (Handa et al., 2025)

The same split, reported by the employers themselves

FIGURE 4:
Selected Characteristics of Employers
Decreasing vs. Increasing Entry-Level Hiring Due to AI

Employers <u>decreasing hiring</u> due to AI are more likely to ...	Employers <u>increasing hiring</u> due to AI are more likely to ...
Have partially integrated AI tools	Have strategically integrated AI tools
Say AI has reduced routine or administrative tasks within entry-level roles	Say AI has increased analytical or judgment-based responsibilities within entry-level roles
Be dissatisfied with recent entry-level hires	Be highly satisfied with entry-level hires
Expect entry-level hiring to be more difficult in 2026	Expect entry-level hiring to be easier in 2026

Strada Institute, Entry-Level Hiring in the AI Era, May 2026, Fig. 4 · decreasing n = 230, increasing n = 660

FIGURE 8:

AI Impact on Entry-Level Job Tasks by Industry

Base: Employers that have at least explored using AI and hire entry-level employees (N=1,387).
Because respondents could select multiple options, percentages do not sum to 100%.

What moved was the mix of tasks

Analytical work up for **42%**, routine work down for **41%** — and **33%** report foundational, skill-building tasks reduced. That third column is the one to worry about: it is how a junior learns the job.

Strada Institute, Entry-Level Hiring in the AI Era, May 2026, Fig. 8

AI literacy is rated last of eight

Importance **3.5**, below critical thinking and communication at 4.3. It is also the only skill where employers rate graduates' performance *above* its importance.

Strada Institute, Entry-Level Hiring in the AI Era, May 2026, Fig. 9

FIGURE 9:

Employer Ratings of Skill Importance and Performance for Entry-Level College Graduate Hires

Base: Employers that typically require a bachelor's degree or higher for entry-level positions (N=687). Performance ranges from 1 ("Poor") to 5 ("Excellent"). Importance ranges from 1 ("Not at all important") to 5 ("Critically important").

Employer perceptions of college graduates preparedness to use AI in the workplace

Number of respondents = 153

And employers do not report unprepared graduates

87% say graduates are prepared to use AI at work. “Very unprepared” is **0.7%**.

The widely quoted “69% of employers say graduates are unprepared for AI” is this chart read backwards.

NACE, Job Outlook 2026 Spring Update, spring 2026

What is still unsettled

- **Past records against future expectations**
Canaries measures payrolls through Sept 2025 · Strada asks employers what they expect for 2026
- **Magnitude and cause remain contested**
the authors warn the first two facts could reflect other changes in the US economy · Feb 2026 follow-up tests interest rates and timing
- **35% of entry-level jobs ask for AI skills**
nearly triple the share six months earlier — though only 16.5% of job descriptions actually mention them
- **Three sample sizes, three orders of magnitude**
185 respondents · 1,498 respondents · millions of payroll records

What the compute costs

UNU-INWEH, Environmental Cost of AI's Energy Use, 3 June 2026

Where it is landing

Brazil is now Latin America's data centre hub.

Dialogue Earth, March 2026

AI for whom?

- Brazil is Latin America's data centre hub
Ceará, Rio Grande do Sul, São Paulo — competing for the investment
- A federal tax regime to attract it
REDATA, Sept 2025 — tax relief tied to renewable sourcing and R&D
- In Ceará, Anacé leaders are trying to block one
ByteDance's facility at Porto do Pecém, near a river they depend on
- Authorities say no consultation was required
because the Anacé hold no formal land title — the community disputes it

Two-thirds discuss AI for tasks · 11% for positions

Ways employers are considering AI integration in regard to workforce planning

Two-thirds of employers are discussing AI for tasks but 11% are discussing it in terms of positions being eliminated

Number of respondents = 149

NACE, Job Outlook 2026 Spring Update, spring 2026

The shape of the semester

- **Foundations**

what AI is and how these systems work — conceptually, never mathematically

- **AI in Business**

operations, marketing, finance, HR, strategy — what works, what is oversold

- **AI and Society**

work, bias, sustainability, health, the Global South — Ceará at full length

- **Governance**

regulation, ethics, risk, accountability — the AI Act, the LGPD, and what a company does about them

The hard part is not the technology. It is deciding what your organisation does about it.

Before the next session
